Vehicle Diagnostic Assistant™

POWER PERSONIFIED.

This easy to use tool puts the power of Truck OEM diagnostic software into a complete easy to use package. Our customized computer system will provide technicians with the right tools to diagnose the engines, transmissions and braking systems found in today's buses, trucks and automobiles. A graphical user interface enhances the tools ability to guide the technician through diagnostic procedures, enabling the technician to get to the root of the problem quickly.

It is the perfect solution for the maintenance area environment. The Vehicle Diagnostic Assistant utilizes the Panasonic Toughbook which features a magnesium alloy LCD case, 20 times stronger than ABS plastic, to protect this critical and expensive-to-replace components. The hard disk drive is mounted in shock-absorbing polymer compounds insulating the Hard Drive from vibration and shock, while protecting mission-critical data.

The Vehicle Diagnostic Assistant™ is updateable and is customized for each of our customer's specific needs. It is essential for today's service bay technicians.

KEY FEATURES

- Software Guide** A graphical user interface guides technician through the proper selection of software, interface boxes and cables for a given vehicle.
- OEM Software** Original Equipment Software provides the technician with the same tools and information that is found in dealerships and OEM service centers. Software applications give the technician the ability to view & clear codes, monitor parameters, run diagnostic test and access diagnostic trees. Applications for engines, transmissions and braking systems are available.
- Portable & Rugged Design** The Panasonic Toughbook laptop is designed to meet the needs of the demanding user. It is the perfect computer for the service bay. It has been tested for resistance against drops, liquid, dust and temperature.
- Support** A friendly staff utilizes an interactive knowledge database to assist customers with issues. This database helps our service personnel quickly and accurately post issues and search past issues to provide customers with prompt assistance.
